UPS Electrical Installations

Part No.

Product Description

At APS, we provide a full UPS electrical installation service of the highest standard. We will take care of all your UPS and installation requirements from initial design, all the way through to final electrical testing. All our work is completed by experienced, qualified engineers in full compliance with statutory regulations. We aim to provide a professional UPS installation service at a cost effective price, regardless of your project size.

It should be noted that a UPS larger than 3KVA will need to be electrically installed by a qualified electrician or electrical engineer and requires a trained UPS engineer to be commissioned. This ensures your UPS is configured correctly to manufacturer standard and any comprehensive UPS guarantee remains valid throughout the warranty period.

Our electrical services portfolio is extensive:

- Electrical design
- UPS Installation
- Electrical Testing
- Electrical Mapping
- Completion Certificates
- Full schematics and schedules
- UPS Commissioning Certificates

Occasionally clients choose to carry out their own electrical work. In such circumstances we can supply a full UPS installation support package to assist with this process and ensure a smooth installation is completed on time and on budget.
