UPS Load Bank Testing

Part No.

Product Description

Adept Power Solutions recommends an annual Load Bank Test of your UPS system and this test can be provided during your annual UPS service or as a standalone visit. A load bank provides a resistive load to your UPS and battery system providing proof of concept of your power protection infrastructure in a controlled environment.

The load bank test also enables any potential problems to be highlighted in safe conditions and enables crucial corrective measures to be taken promptly, ensuring your UPS system will work as designed, as and when you need it in a live scenario. The test can also be arranged outside of normal working hours to minimise risk following the discharge of the battery system.

As well as Load Bank Testing the following additional UPS Maintenance options are available:

- Additional service visits
- Remote monitoring
- Out of hours service visits
- Battery impedance testing
